

# SAFE STORAGE RULES

## PROHIBITION OF STORING HAZARDOUS MATERIALS

It is **strictly forbidden** to store: explosives, gas cylinders, poisons, toxic waste, acids or flammables, weapons, ammunition, items from criminal activity, and live animals.

### Prevent liquid leaks

If storing machinery (lawnmowers, motorcycles), ensure no operating fluids (oil, fuel) leak onto the floor.

### Arrival check

Always check for damage to the entrance, doors, or security handle before opening.

### Security upon departure

Before leaving, check that doors are fully closed and lift the security handle up to the "locked" position.

### Premises security

When leaving, wait for the entrance gate to close completely. Immediately report any suspicious activity or damage to the premises.

### No tampering with electricity

Interfering with lighting or connecting your own electrical devices is prohibited. Report faults immediately.

### Keep the premises clean

Maintain cleanliness in your unit and the entire premises. Leaving items outside your rented space is prohibited.

### Dry items only

Store only dry items in the unit. Damp textiles, carpets, or mattresses can quickly grow mold.

### Breathable furniture packing

Do not wrap furniture in airtight foils, which trap moisture. Use blankets or breathable covers instead.

### No food storage

Do not store food or animal feed. Food could spoil, and the resulting odor could ruin your other belongings.

### Frost protection

The containers are unheated. Do not store paints, cleaners, or other liquids that could freeze, burst, and leak.

### Protecting sensitive items

We recommend carefully packing and sufficiently protecting items sensitive to temperature changes against degradation.

### Stability and shelving

Secure all items against falling. Ensure shelving is stable and weight is distributed safely and evenly.

### Clear space near doors

Do not push furniture and boxes directly against the doors. Leave a small gap at the entrance so doors open smoothly.

### Continuous inspection

Although the containers are waterproof, proactively check for any moisture penetration during every visit.
